About Altered Security

Altered Security is an **EdTech company** focused on hands-on learning through its red team training platform and cyber ranges, with offices in **India and Singapore**.

We specialize in **Red Team Training, InfoSec Education Platforms, and Cyber Ranges**, and pioneered affordable red team labs used by professionals worldwide.

Industry-recognized hands-on certifications

Enterprise-focused Active Directory, Azure and AI security labs

Mission, Vision & Core Values

Our Mission

Altered Security's mission is to enable individuals and organizations to master Red Team, Cloud Security, AI Red Teaming and Information Security skills through hands-on, innovative, and affordable education that delivers practical value.

Our Vision

To build a global community of skilled professionals with demonstrable expertise to address the latest challenges in the Information Security industry.

Core Values

Affordability

World-class training balancing cost and quality, enabling participation from professionals across the globe.

Quality

We maintain the highest standards across our platform to ensure exceptional learning experiences.

Innovation

Pioneering Red Team labs and offensive security education with continuous innovation.

Empathy

We support our students and community with understanding, respect and human-first interactions.

Giving Back

We actively promote and sponsor cybersecurity community events worldwide.

Outstanding Support

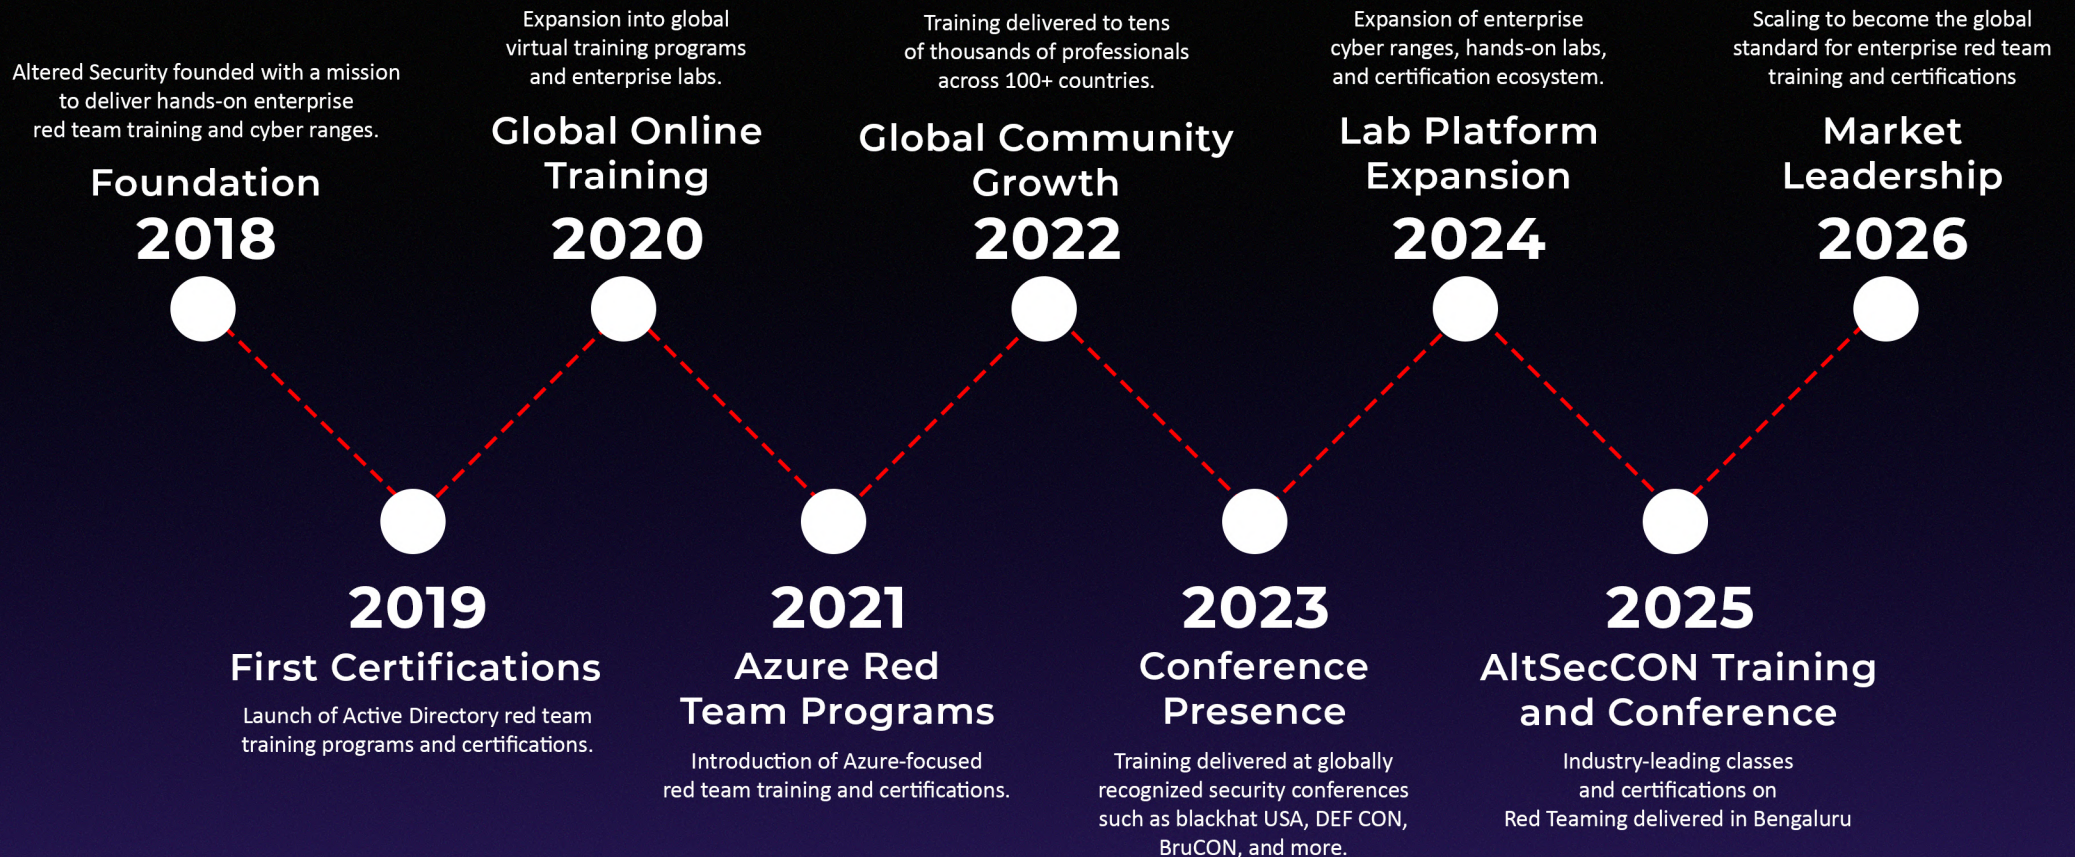

Dedicated human support ensuring professionals receive guidance at every stage of learning.

Altered Security Journey

Building the Global Enterprise Red Team Training Platform

Future of Enterprise Security

Enterprise infrastructure worldwide is heavily dependent on Active Directory, Azure and AI making them the primary focus for modern red team operations and enterprise security strategies.

Organizations using
Active Directory

90%

Fortune 500
companies using Azure & Microsoft AI

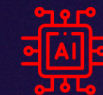

95%

Security Focus is Shifting

Active Directory Attack Surface

Azure Identity & Cloud Security

Agent identities & LLMs

Opportunity

A scalable enterprise security education platform focused on red teaming and penetration testing of Active Directory, Azure and AI has the opportunity to define and lead this category globally, with limited specialized competition today.

The Enterprise Security Problem

Modern enterprise environments rely heavily on Active Directory, Azure and AI, making them prime targets for attackers. However, there is a significant gap between theoretical security knowledge and practical red team skills required to secure these environments.

Limited Hands-On Training

Most security education focuses on theory rather than real enterprise attack scenarios.

Complex Enterprise Environments

Active Directory, Azure and AI infrastructures are large, interconnected and difficult to test securely.

Shortage of Skilled Professionals

Organizations struggle to find professionals with practical enterprise red team experience.

Lack of Realistic Practice Labs

Few platforms provide enterprise-scale environments simulating real attack paths.

Impact

- Organizations remain vulnerable to identity-based attacks
- Security teams lack practical red team capabilities
- Training programs fail to replicate real enterprise environments

Our Solution

Altered Security bridges the gap between theoretical security knowledge and practical red team capabilities through hands-on enterprise labs, industry certifications, and global training programs.

Enterprise Red Team Labs

Hands-on cyber ranges simulating real Active Directory, Azure and AI enterprise environments.

Industry Certifications

Practical certifications validating real-world red team and enterprise attack skills.

Global Training Programs

Instructor-led, virtual, and on-demand programs delivered to professionals worldwide.

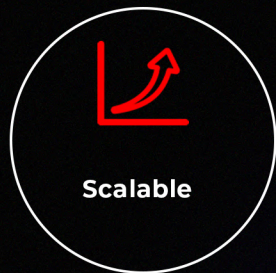

Enterprise Security Focus

Specialized focus on Active Directory, Azure and AI enterprise security environments.

Our Platform Advantages

Altered Security provides a hands-on red team learning platform designed to simulate real enterprise environments through practical labs, flexible access, and industry-recognized certifications.

Scalable

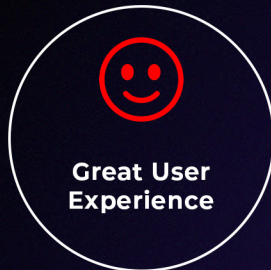

**Cost
Effective**

**Stable
Infrastructure**

**Enterprise
Security Focus**

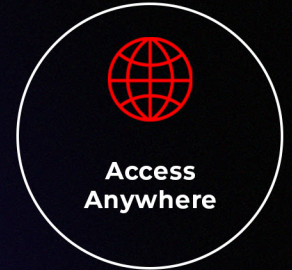

**Great User
Experience**

**Reusable
Labs**

**Properly
Licensed**

**Access
Anywhere**

The labs enable enterprises to understand, execute, and detect modern cyber threats in a safe and controlled enterprise lab environment.

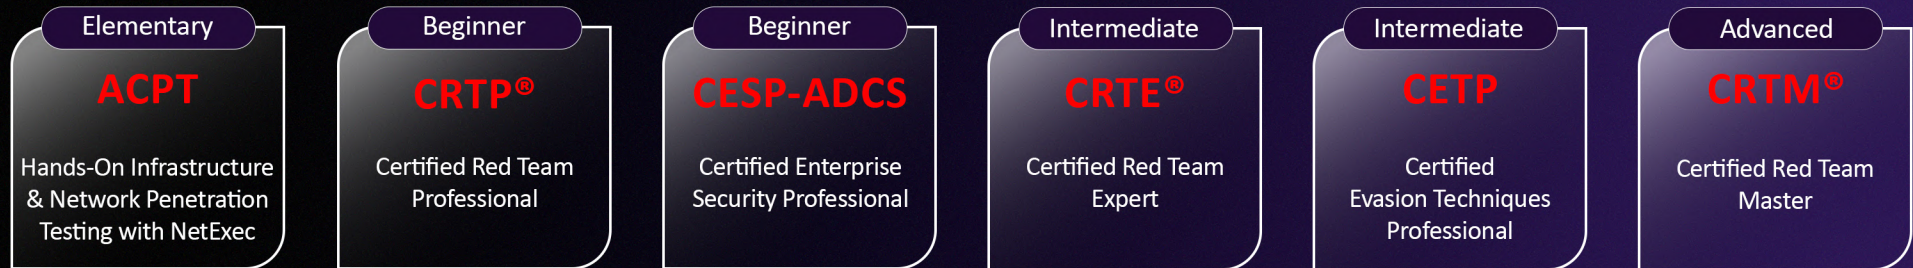

They eliminate the time and cost required to set up and maintain complex Active Directory, Azure and AI security labs.

Red Team Lab & Certifications

Altered Security provides hands-on red teaming certifications designed to validate practical skills in attacking and assessing modern enterprise environments. The programs focus on Active Directory, Azure and AI environments, enterprise attack paths, and real adversary simulation techniques used by professional red teams.

On-Prem Enterprise Red Teaming

Azure Enterprise Red Teaming

AI Red Teaming

About the Team

Founder of Altered Security and a globally recognized red team trainer and researcher, known for delivering training at leading security conferences, including blackhat USA, DEF CON, BruCON and more, and developing advanced red team methodologies.

30+ Security Professionals

The Altered Security team includes experts across multiple functions including research, training, lab development, and global training operations.

- Research & Development – Developing new red team techniques and tools
- Training & Research – Designing and delivering hands-on training programs
- Lab Support – Maintaining enterprise-scale training lab environments
- Operations & HR – Managing global training operations and community engagement

Nikhil Mittal
Founder, Altered Security

Meeting the Demand for Advanced Red Teaming Skills

Altered Security is recognised as a global leader in enterprise red team training and certifications.

Specialized Focus

Dedicated focus on Active Directory, Azure and AI red teaming, the two most critical enterprise security platforms.

Proven Impact

50,000+ professionals trained,
10,000+ certifications issued,
and 300+ Enterprise Clients

Hands-On Learning Platform

Enterprise-grade red team labs and cyber ranges that simulate real attack scenarios.

Global Recognition

Training delivered at leading global security conferences, including blackhat USA, DEF CON, BruCON, and others.

Strong Community & Research

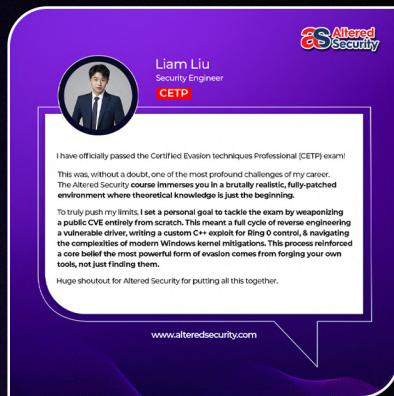

Open-source tools, security research, and conference talks by experienced red team practitioners.

“The Global Standard for Enterprise Red Team Training.”

What Our Students Say

Liam Liu
Security Engineer
CETP

I have officially passed the Certified Evasion Techniques Professional (CETP) exam! This was, without a doubt, one of the most profound challenges of my career. The Altered Security course immerses you in a brutally realistic, fully-patched environment where theoretical knowledge is just the beginning.

To truly push my limits, I set a personal goal to tackle the exam by weaponizing a public CVE entirely from scratch. This meant a full cycle of reverse engineering a vulnerable driver, writing a custom C++ exploit for Ring 0 control, & navigating the complexities of modern Windows kernel mitigations. This process reinforced a core belief the most powerful form of evasion comes from forging your own tools, not just finding them.

Huge shoutout for Altered Security for putting all this together.

Mateusz
Senior Pentest Specialist
CARTP

If someone is interested in offensive Azure security, I highly recommend this course (CARTP). Very well structured and prepared course with awesome hands-on labs in affordable price.

The materials are clear and all topics well explained so even a complete newbie won't have problems with understanding. Labs are challenging enough so students can put their skills to the test. The best part for me are free, lifetime course materials updates for all students. It's really valuable as Azure is very fast developing environment nowadays. The renewal policy seems very fair too.

It's definitely not the last course from Altered Security I took!

www.alteredsecurity.com

Mickey De Baets
Lead OffSec Engineer

I have successfully obtained the Certified Evasion Techniques Professional (CETP) certification from Altered Security.

This course provided an incredible deep dive into Windows Internals, EDR evasion, and kernel-level exploitation. I can't recommend it enough!

www.alteredsecurity.com

Mohammad Qtaish
Information Security Officer
CRTP

I'm excited to share that I have officially earned the Certified Red Team Professional (CRTP) certification!

This certification deepened my knowledge of Active Directory exploitation, privilege escalation, and lateral movement techniques all from a real-world red team engagement perspective.

I'm also proud to mention that I took the newly updated CRTP exam, which made the challenge even more interesting and valuable.

Thanks Altered Security.

Ryan Standbridge
Senior Incident Responder

I recently passed the CARTP exam by Altered Security.

A fantastic course for anyone wanting to get hands on experience with red teaming in Azure. This course is not just aimed at those with red team experience, and is friendly to beginners.

www.alteredsecurity.com

Nicolas Alcântara
Red Team Trainee

Certified Red Team Professional® (CRTP®)

It was definitely not an easy exam. It required strong reasoning, attention to detail, and a deep understanding of Active Directory in real-world attack scenarios. Because of that, the learning experience throughout the process was incredibly valuable.

Each stage of the exam pushed me out of my comfort zone, forcing me to connect concepts and truly think like an attacker, which made a huge difference in my technical growth.

www.alteredsecurity.com

Halima SAHBOUD
Offensive Security Consultant

Proud to announce that I have successfully passed the CRTP certification exam by Altered Security.

This certification has significantly deepened my understanding of how modern Active Directory environments can be compromised end-to-end.

A huge thanks to Altered Security and Nikhil Mittal for the exceptional quality of the training and the hands-on lab environment.

www.alteredsecurity.com

Robiul Awal Fagun
Student of CRTP

I'm thrilled to share that I have successfully cleared the Certified Red Teaming Expert (CRTE) certification from Altered Security.

This certification was an intense and hands-on journey into advanced Active Directory and enterprise attack paths. It helped me strengthen my expertise in enumerating, exploiting, and chaining misconfigurations across multi-domain Windows environments, simulating real-world adversary behavior.

CRTE truly pushed my understanding of red teaming to the next level from domain privilege escalation and cross-trust attacks to persistence techniques. A big thank you to Nikhil Mittal and the Altered Security team for building such a challenging and realistic lab experience!
